

Novartis has been a long-standing leader in the discovery and development of innovative therapies to treat rare diseases—ranging from rare cancers like neuroendocrine tumors, pituitary disorders such as Cushing’s disease and acromegaly, and debilitating genetic diseases such as tuberous sclerosis complex (TSC). Novartis has had a deep commitment to supporting healthcare professionals and improving patient care for those with rare and debilitating diseases. Through clinical research, education and collaboration, Novartis is dedicated to bringing meaningful solutions and help meet the needs of often underserved rare disease patient communities.
